

ARI — Agent Experience

What agents do vs. what the platform handles

Agents sign up, we set them up, they run follow-up from one dashboard — no phone carriers, no developer setup.

Product: ARI (myari.io)

Date: September 22, 2026

Prepared by: Kikzeny Cartagena LLC

Version: Founding 100 · Launch

Short answer: Agents do *not* purchase their own phone numbers or configure Twilio, Vercel, Supabase, or webhooks. Messaging runs on the ARI platform. Agents create an account, get white-glove onboarding, and use the CRM to manage leads and campaigns.

Do agents need their own phone numbers for SMS?

No — not at launch. SMS is sent through ARI's platform Twilio account (configured once in production). Agents message from the shared ARI sending number. They do not open a Twilio account or buy a number separately.

Future option (Team / brokerage tier): dedicated local numbers per agent or office — optional add-on, not required at sign-up.

Channel	How it works for agents	Agent setup required?
SMS	Sent via platform Twilio number	No
Ringless voicemail	Sent via platform Slybroadcast	No
Email	Sent via platform Resend	No
AI voice scripts	Generated via platform ElevenLabs	No — record or generate in Voice Scripts

What happens when someone signs up

Step	Agent does	ARI / platform handles
1	Creates account (email + password)	Authentication, workspace provisioning
2	Starts 14-day trial / selects plan	Stripe billing & subscription
3	Attends onboarding call (Founding 100)	Lead import, first campaign, dashboard walkthrough
4	Uses dashboard daily	Hosting, database, compliance, messaging delivery

Sign-up: ~2 minutes | **Go-live:** typically 24–48 hours with white-glove setup

✓ What agents do in the app

- Import leads (CSV or manual)
- Build follow-up campaigns (SMS, email, ringless VM)
- Record or generate voicemail in Voice Scripts
- Launch campaigns when ready
- Work dashboard — who to call next, replies, tasks
- Optional: Google Calendar, Dotloop

✗ What agents never do

- Buy Twilio numbers or SMS accounts
- Configure Vercel, Supabase, or servers
- Set up webhooks or API keys
- Manage Slybroadcast, Resend, or ElevenLabs
- Handle TCPA/DNC infrastructure manually

Platform backend (already configured — not agent-facing)

- Production hosting & domain (myari.io)
- Database & file storage (Supabase)
- Twilio SMS + STOP/HELP compliance webhooks
- Slybroadcast ringless voicemail delivery
- Resend transactional email
- ElevenLabs AI voice generation
- Stripe subscriptions · Clerk authentication
- Consent tracking, DNC scrubbing, quiet hours

Agent pricing (messaging included or billed through ARI)

Plan	From	Highlights
Starter	\$49/mo	CRM + pay-as-you-go SMS / RVM
Growth	\$99/mo	750 SMS + 250 RVM included / mo
Pro	\$199/mo	2,000 SMS + 1,000 RVM / mo
Team	From \$299/mo	Multi-user, pooled messaging, custom volume

Agents pay ARI — not a separate Twilio or carrier bill.

Compliance note

ARI includes consent tracking, opt-out (STOP), DNC scrubbing, and quiet hours. Agents must only message contacts who have opted in. Platform handles delivery infrastructure; agents control who gets enrolled in campaigns.
